#### Reasons For Allowance

Claims 1 – 28 are allowable.

1. The following is an examiner's statement of reasons for allowance: in combination with other limitations of the claims the prior arts made of record fail to suggest a comparator for an analog-to-digital converter and method comprising an amplification means which includes a first tapping or level shift transistor coupled to a bipolar latch stage for, depending on the latch decision, tapping a collector current from the latch stage, while leaving the latch decision thereof unaffected, so that a current gain of the bipolar latch stage can be used to amplify a latch bias current of the bipolar latch stage to thereby provide for the amplification of the output signal. Also, in combination with other limitations of the claims the prior arts made of record fail to suggest an analog-to-digital converter and method comprising an amplification means which includes a plurality of comparators wherein each comparator comprising a first tapping or level shift transistor coupled to a bipolar latch stage for, depending on the latch decision, tapping a collector current from the latch stage, while leaving the latch decision thereof unaffected, so that a current gain of the bipolar latch stage can be used to amplify a latch bias current of the bipolar latch stage to thereby provide for the amplification of the output signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
3. Devendorf et al. (US Patent Number 4,237,387) discloses a high speed latching comparator.
4. Furihata (US Patent Number 4,509,036) discloses an A/D converter with bit extension capability using wired-OR outputs.
5. Kleks (US Patent Number 4,814,642) discloses a switched impedance comparator.
6. Wright (US patent Number 5,264,740) discloses a programmable voltage hysteresis on a voltage comparator.
7. Dingwall et al. (US Patent Number 5,291,198) discloses an averaging flash ADC.
8. Swenson (US patent Number 5,502,441) discloses an analog switched capacitor vector quantizer.
9. Flynn (US Patent Number 6,114,882) discloses a current comparator and method therefor.
10. Butler (US Patent Number 6,225,937) discloses metastability resolved monolithic ADC.
